Diploma thesis review

WARNING CLOTHING - STUDY OF FLUORESCENCE FADING IN WASHING

Author : Joyful Zamasomi Msomi

High-visibility clothing, a type of personal protective equipment (PPE), is any clothing worn that has highly reflective properties or a colour that is easily discernible from any background. Yellow waistcoats worn by emergency services are a common example. This diploma work first aim was problem of reproducible measurement of colorimetric parameters fluorescent materials, which are used for high-visibility clothes. It is little bit confusing, that author used only values measured under finally chosen setup of measuring devices, respectively one of three tested devices.

On the other side author of this diploma thesis worked independently with enthusiasm and deep interest in studied problems of this scientific field.

Based on that my overall evaluation of diploma work is:

- excellent -
