Description

LOOK is half augmented reality through which you can watch the stars above your city and half virtual astronomical encyclopedia. It combines astronomical telescope with magic view through your dark city. Enjoy your trip to dark sky anywhere you want. Your camera becomes telescope! It's magic!

Your view is controlled with gps, exact time and date anywhere on Earth. You can also touch any object on your dark sky and LOOK will tell you what are you looking at...[more](#)

What's New

14.10.2014

Fix some bugs on iOS 5. I still suggest that people upgrade to iOS 6 for a better usability.
